## Background

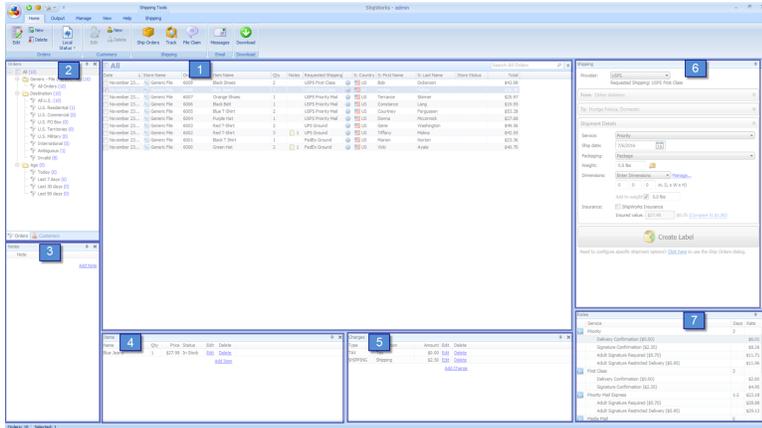

ShipWorks displays order and customer information in "**panels**." A **panel** is a section of the ShipWorks window. Each panel contains information related to the order highlighted in the Orders grid, or to the customer highlighted when viewing the Customers grid.

This article will guide you through what the default panels are, how to reset your default panels, additional panels that are available in ShipWorks and how to rearrange panels within the ShipWorks software.

## Default Panels

By default, ShipWorks displays these six panels:

1. **Orders** - displays a list of all orders, with columns configured to your preference
2. **Filters** - a list of all Filters set up in your ShipWorks, including all default Filters and any Filters you have configured, but no Quick Filters
3. **Notes** - displays any notes that have been written for the highlighted order, and an option to Add Notes
4. **Items** - displays the items included in the highlighted order, with columns configured to your preference
5. **Charges** - displays the charges for the highlighted order (shipping, taxes, insurance, etc.), with columns configured to your preference
6. **Shipping** - provides the capability for the user to quickly process individual shipments
7. **Rates** - displays the rates associated with the properties selected in the Shipping panel

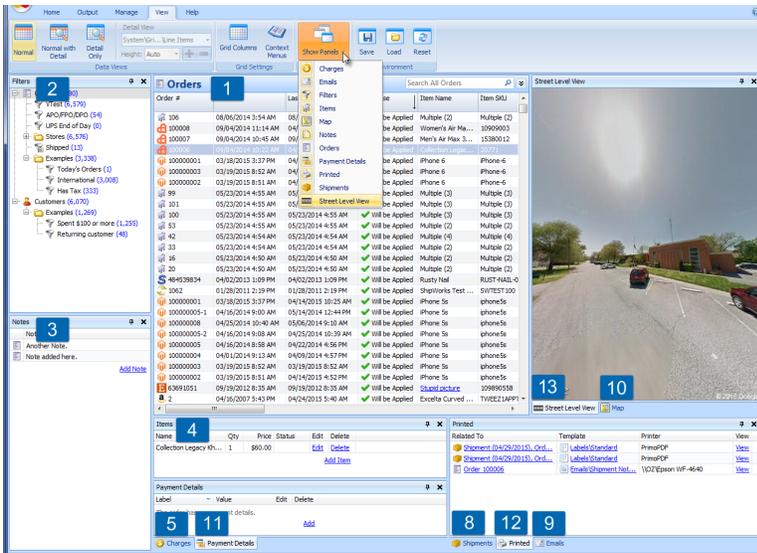

## Additional Panels

You may also choose to show (or hide) any of these additional panels:

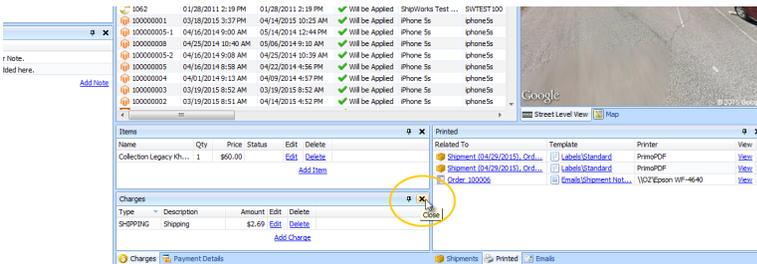

8. **Shipments** - displays the currently selected shipping information for the highlighted order, with columns configured to your preference, as well as other available rates with that same carrier
9. **Emails** - displays any e-mail history for the highlighted order
10. **Map** - displays the Google Map view of the ship-to address of the highlighted order
11. **Payment Details** - displays a payment summary, with columns configured to your preference
12. **Printed** - shows what documents (if any) have been printed for the highlighted order
13. **Street Level View** - shows the Google street level view of the ship-to address of the highlighted order

Below is the interface with all eleven panels displayed. You'll notice that a few of the panels share some screen space. Notice in this example the **Shipments**, **Printed**, and **Email** panels all share a space. The selected tab will be visible on top of the other panels in that space.

## Closing a Panel

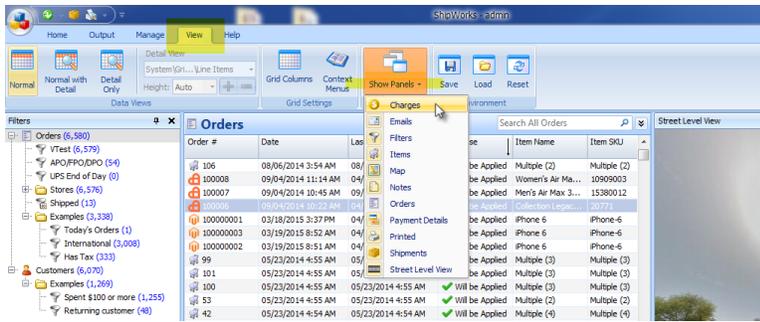

1. Simply click the **x** in the title bar of the panel. In the image below, the **Charges** panel will be closed.

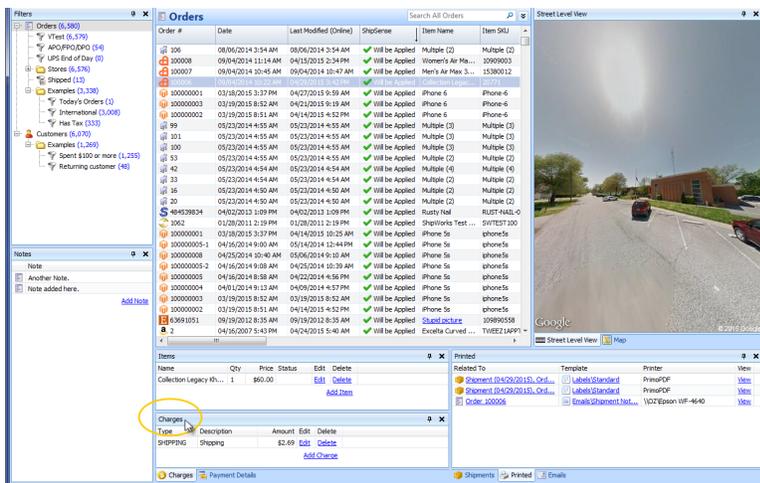

## Showing a Panel that is Not Currently Visible

If you have closed a panel and would like to make it visible again, or if you would like to see an additional panel, it takes just a few mouse-clicks to get what you need.

1. Open the **View** tab, then click **Show Panels** and you'll see all the available panels. Choose the panel you would like to see, and you're done!

2. Confirm that the panel you selected is now visible. Here is the window after selecting **Charges** from the **Show Panels** drop-down on the **View** tab.

## Location of Panels

In addition to closing or showing various panels, you can change their positions on the page by dragging and dropping them where you want, you can pin them to the side of the window (much like minimizing them), or you can even pop them out to view them in a separate window. For detailed instructions on working with panels, please see [Moving Panels in the ShipWorks Display](#) and [Resetting the Default Panel Display](#).

Don't worry if you change something and you don't like the way it looks. You can always use the Reset button. (See [Resetting the Default Panel Display](#)).

## Still Need Help?

Please feel free to [reach out to one of our awesome Customer Care representatives in St. Louis](#). We are happy to assist you.
